

ANOV M4 1000

Bitcoin Mining Container

FEATURES

PERFORMANCE

The ANOV M4 1000 was developed specifically for the Bitcoin Mining process. This specialization makes it, technologically and economically, one of the most efficient containers on the market. The passive cooling system reduces your operating costs while increasing the internal capacity of the ANOV M4 1000.

- _ up to 1 MW capacity in a 40-foot container
- _ offers lots of space, e. g. for the 288 x Bitmain S19 Pro
- _ direct air cooling

RELIABILITY

The ANOV M4 1000 is built to industrial standards for maintenance-free outdoor use. Integrated video surveillance and role-based access control make the containers secure. The „Made in Germany“ seal of approval stands for quality and durability, reduced maintenance requirements and extended service life.

- _ operational from -35 °C to +35 °C
- _ protected against wind, rain and snow
- _ automatic temperature control
- _ full remote monitoring and control of operating and performance data
- _ redundant network connection (wire + wireless)
- _ emergency power supply for blackout access

FLEXIBILITY

The ANOV M4 1000 is flexible in its design and handling. We offer comprehensive support, from planning to operational management, regardless of the manufacturer of the rigs being used. The container can be adapted to your individual requirements. It can also be quickly made operational with customer-specific extensions.

- _ supports mining equipment from Bitmain, Canaan, MicroBT and other manufacturers
- _ modular and scalable
- _ easy to transport thanks to standard 40-foot container
- _ individual design possible

\\ SPECIFICATIONS

Maximal Power	1 MW
Cooling	direct air cooling
Size	40-foot container
Weight	7,000 kg
Operating Temperature	-35 °C to +35 °C

SAMPLE CONFIGURATION

Rigs	288 x Bitmain S19 Pro @ 110 TH/s
Power	985 kW
Hashrate	31.68 PH/s

„The ANOV M4 1000 container can accommodate mining rigs from various manufacturers: Bitmain, Canaan, MicroBT and ANOV Rigs.“
